

PEA516:ANALYTICAL SKILLS-II

L:2 T:2 P:0 Credits:4

Course Outcomes: Through this course students should be able to

CO1 :: employ the concepts learnt to analyze and solve the problems related to work based on time and efficiency

CO2 :: use an appropriate approach to solve problems related to time, speed and distance

CO3 :: analyze the various logical reasoning techniques to solve problems related to series completion, coding decoding in minimum possible time

CO4 :: utilize the analytical skills to calculate the simple and compound interest

CO5 :: articulate an appropriate approach to solve the problems related to clock and calendar

CO6 :: analyze the logical reasoning aptitude problems related to puzzle test and non-verbal reasoning to solve accordingly

Unit I

Time & work : work efficiency, computation of work done together, work on alternate days, negative and partial work, work and wages, chain rule

Pipe & cistern : single and multiple pipes working together, alternating pipes, volume of tank

Unit II

Time & distance : concept of time speed and distance, conversion of units, average speed, variable speeds

Problem on trains : relative speed concept, crossing a stationary and moving object

Boats & streams and races : concept of downstream and upstream, linear and circular track problems

Unit III

Sequence and series completion : number series, alphabet series, alphanumeric series

Alphabet test and logical sequence of words : alphabetical and logical order of words, word formation by unscrambling letters, alpha-numeric sequence puzzle

Coding- decoding : letter coding, number and symbol coding, substitution coding, mixed letter coding, mixed number coding, language coding

Unit IV

Simple interest : principal, rate and time concept, rate computation, time computation, amount and interest computation

Compound interest : concept of compound interest, relation between compound and simple interest, depreciation problems

Insert the missing character : set of figures, set of arrangements, set of matrix

Unit V

Calendar : calculating odd days, concept of calendar, finding the exact day and date

Clock : concept of clock, angle computation, loss or gain in time, faulty clock, mirror image of a clock

Data sufficiency : reasoning and quantitative data sufficiency problems

Unit VI

Coding inequalities : mathematical operations, rules of inequalities, coded relations

Puzzle test : seating/placing arrangements, comparison type questions, sequential order of things, family based problems

Non-verbal reasoning : series of figures, analogy of figures, classification of figures

Text Books:

1. A MODERN APPROACH TO VERBAL & NON-VERBAL REASONING by DR. R S AGGARWAL, S Chand Publishing
2. QUANTITATIVE APTITUDE FOR COMPETITIVE EXAMINATIONS by DR. R S AGGARWAL, S Chand Publishing
